

Utkarsh Sahai

Technical Product Manager | AI Product Manager

utkarshsahai22@gmail.com | Mobile: +91 7318332666 | LinkedIn: Utkarsh Sahai | Gurugram, India

PROFESSIONAL SUMMARY

Technical Product Manager in transition from backend engineering, with a track record of architecting systems at scale, including a batch-tracking platform monitoring 4 million+ items, and turning ambiguous technical problems into adopted solutions. Skilled at bridging technical execution and stakeholder vision, with experience pivoting underperforming internal tools into platforms teams actually used. Currently applying that same discipline through hands-on PM execution, drafting PRDs and building product tools, to bring a grounded, user-centric approach to AI product strategy.

EDUCATION

B.B.D. NIIT, Lucknow, Uttar Pradesh

B.Tech Electronics and Communication : 6.6 CGPA | Aug 2016 - Sep 2020

EXPERIENCE

Accenture, Gurugram

Web Developer, Analyst | Feb 23 - Mar 26

- * **Batch Tracking System (Python FastAPI, Neo4j, PostgreSQL, Azure, Git)**: Partnered cross-functionally with plant stakeholders, the ETL team, and the product owner to define exactly what data mattered for tracking a batch, then led end-to-end delivery of a secure, real-time system that surfaced it to authorized users only. Boosted backend performance to cut data retrieval time by 30%; adopted across 12 of 21 manufacturing facilities, replacing manual SAP lookups and reducing the errors they caused.
- * **TLM Chatbot (Django, PostgreSQL, Python, Azure, Git)**: Pivoted an underutilized Q&A chatbot into a strategic Total Lifecycle Management (TLM) tool by identifying and delivering self-service capabilities for resource deployment, patching, and migration. Optimized support workflows by introducing in-chat incident creation and automated data gathering, organizing provisioning queues and reducing team workload by 35%.
- * **ServiceNow Integration APIs (Python, REST, ServiceNow, AppDynamics)**: Unified visibility across 1,200+ enterprise software assets by engineering the ServiceNow-AppDynamics integration and the API design standard adopted across 10+ integrations, cutting manual intervention by 45%.
- * **Automation & Cloud Ops (Python, Rundeck, Ansible, ServiceNow)**: Cut incident resolution time by 25% by automating provisioning, incident, and change workflows across dual-stack (IPv4/IPv6) infrastructure, enabling web-based self-service automation for teams.

Accenture, Bengaluru, Karnataka

Python Developer, Associate | June 21 - Jan 23

- * **Web Application Automation (Python, Selenium)**: Freed up 150 hours of repetitive work monthly by automating application support processes across teams.
- * **CI/CD Web Deployment (Python, Jenkins, Ansible)**: Enabled zero-downtime, 30% faster web deployments by designing and deploying secure CI/CD pipelines for web applications.
- * **Collaborative Python Projects (Python)**: Led 3 cross-team automation initiatives with 8-18 member teams, coordinating backend development and code reviews that lifted workflow efficiency by 40%.

SKILLS

Product Skills: AI Product Strategy & Roadmapping, Requirements Gathering & Prioritization (PRDs), Agile & Scrum Delivery, Cross-Functional Stakeholder Management, API & System Design, Process Standardization, Technical Documentation

Technical Skills: Python, SQL & Data Modeling, REST API & System Design, LLM/OpenAI API Integration, Django, FastAPI, PostgreSQL, Neo4j, Cloud Infrastructure (Azure)

Tools: Jira, Excel, Git, Jenkins, CI/CD, OpenAI API, Claude, ChatGPT, Cursor (prompt design), LangChain

ACHIEVEMENTS

- Earned “Best Performer” recognition twice within three months for delivering high-impact automation and development initiatives.
- Awarded Accenture’s “ACE Award” for exceptional dedication and being a key catalyst in driving high-impact solutions.
- Recognized for building automation tools and chatbot products that strengthened operational efficiency and streamlined developer processes.
